

## Psychology Induction Activity - Year 1

Create a timeline diagram for psychology – from the emergence of psychology in the late 1800's to date.

N.B. A **timeline diagram** consists of a horizontal bar or line representing time progressing from left to right. This bar is marked with the emergence of different approaches in psychology and the well-known psychologists within that field.

You will need to include: -

- The early emergence of psychology – Wilhelm Wundt
- Psychodynamic
- Behaviourist
- Social
- Cognitive
- Humanistic
- Biological
- Cognitive Neuroscience

These are the areas that we will be studying on the course and you must add detail for each not just the year. This will be due in the first lesson of the autumn term and you will be graded on this work – Be creative! Hand drawn/written timelines will be credited with a higher grade

Examples of formats you could use (of course with different content)
